## **Re: Intermediate Full Stack Developer!, Calgary AB**

Dear Hiring Manager,

After searching for developer jobs on indeed.ca, I came across your job posting. As a developer that has built a couple small projects using some of the technologies you outline. Your company caught my eye. Focusing on a product that customers will want to use and gain value from is my main objective as a developer and it seems that you have done just that.

As far as the dental industry goes I really have no idea of the technical part of the discipline. I do however know that there is a constant flood of new patients and the need to be organized is of the utmost importance. Having had my fair share of fillings and in my early years and a ton of orthodontic work done, I believe data accuracy is most likely very important as well. You wouldn't want to drill into the wrong tooth!

Looking over your product features off of your website, your company seems to be most interested in providing a simple, reliable, and quick software offering to get up and running with no hassles. The fact that your solution is cloud based definitely makes it easier for your customers. No server management. Fast bug fix time. No need to manage a database. A huge win for small and large dental practices that may not want the extra overhead of managing their own data and servers.

I love the fact that your a cloud based SaaS solution and that your in a niche sector for software. This allows for the developer to potentially create a great product by talking with potential customers on features they would deem useful. This aligns with my focus of providing a product that people will want to use and rely upon.

I look forward to meeting with you to discuss in more detail how my experience and qualifications will best suit the needs of this position. On Monday, May 28<sup>th</sup> I would like to send a follow up email to set up an appointment and discuss how my skills could benefit your company's bottom line.

Regards,

Ryker Rumsey
